The surcharge corresponding to the appropriate Drought Alert Stage shall be added to the block rate whenever the city manager determines that a particular Drought Alert Stage exists.

(c) "Block 1" means all consumption greater than zero but less than or equal to an account's AWC. "Block 2" means all consumption greater than an account's AWC but less than or equal to three hundred fifty percent of an account's AWC. "Block 3" means all consumption greater than three hundred fifty percent of an account's AWC.

(d) "Average winter consumption" (AWC) means the average number of thousand gallons of water use per month reflected on an account's water bill for the most recent consecutive months of December, January, February, and March. For accounts registering no water use in one or more monthly billing periods, an average shall be established based on those months in which there was usage, historical records, or other available relevant data. Under no circumstances shall the AWC for detached residential accounts or attached single unit metered residential accounts exceed eight thousand gallons. The average for billing purposes will be redetermined in April of each year. Notwithstanding the foregoing, if a residential account's AWC is lower than the average AWC of the "detached residential customer classification, the average AWC of all "detached residential customers will be used to determine water quantity charges. For irrigation and pool accounts, all consumption will be billed at the Block 2 rate except for that amount in excess of three hundred fifty percent of the average AWC for all non-irrigation accounts having the same meter size as the irrigation or pool account, which will be billed at the Block 3 rate.

(e) The Drought Alert Stages set forth in subsection (b) above are timing mechanisms for specific drought responses. In the determination of the appropriate Drought Alert Stage, the manager shall make a finding that in order to ensure an adequate amount of water supply for that particular water year, plus a reasonable amount of water reserved for future years, it is necessary to declare the appropriate Drought Alert Stage. These drought stages shall be defined by rules and guidelines issued by the city manager and shall include, at a minimum, the following factors:

(1) Boulder's projected mountain storage during the ensuing May through June period based on snowpack measurements and the projected resulting streamflows during the spring runoff period;

(2) Boulder's portion of water projected to be available in Colorado Big Thompson Storage Reservoirs during the ensuing May through June period;

(3) Boulder's unrestrained water demand; and

(4) Other appropriate data and operating experience.

(f) Bulk water and metered hydrant rate: \$7.00 per thousand gallons of water used. (Service charges do not apply.)

(g) Irrigation water leased on an annual basis: Colorado Big Thompson \$26.00 per acre foot; all other based on cost of assessment plus ten percent administrative fee or \$26.00 per acre foot, whichever is greater.

Ordinance Nos. 5068 (1987); 5106 (1988); 5158 (1988); 5240 (1989); 5377 (1991); 5426 (1991); 5526 (1992); 5676 (1994); 5760 (1995); 5835 (1996); 7270 (2003); 7359 (2004); 7439 (2005).

The PIF for a customer whose total water demand exceeds the water use demand described in Subsection 11-1-52(l), B.R.C. 1981, is as follows:

(A)

Raw Water

$(\text{AYWA}/34,480 \text{ acre feet}) \times \$420,000,000.00$ plus

(B)

Water Delivery Infrastructure

$(\text{PDWD}/50,000,000 \text{ gallons per day}) \times \$310,000,000.00 = \text{Total PIF}$

Where: AYWA = customer's average year water demand in acre feet

34,480 acre feet = city's usable water rights capacity

\$420,000,000.00 = value of city's raw water

PDWD = customer's peak day water demand in million gallons per day

50,000,000 gallons per day = city's current treated water delivery capacity

\$310,000,000.00 = value of city's water delivery infrastructure
